I am writing about the pteranodon longiceps. It is 20 feet from wing to wing. Its beak is very long and it has no teeth. It has a crest on its head. And the scientist know because the fossils go to an animal who lived a long time ago. A big animal lived a long time ago and that means that the big animal was hunting for food. That is how a scientist know the story of the pteranodon and the fish.
Student Entry Sheet - Page 2

First Name: Jalani
Last Initial: N

Drawing:
- Crest
- Pteranodon longiceps
- Beak
- Wing
- Arm
- Tail
- Feets
- Arm
- Wing
- Fingers

Description:
- Sheep Beak
- A crest on its head
- Two Feets
- Arm
- Wing
- Fingers
- Tail
