You have learned about animals by reading the article, "Who Wants a Spiny Snack?" and by exploring the Life at the Limits exhibition.

Now you will write a book to teach your friends about these animals.

Your book will include three animals. The first animal will be the spiny pufferfish. The other two animals will be from the Life at the Limits exhibition.

For each animal, name one body part that helps this animal. Then explain in your own words how this body part works. Include a drawing of each animal and label the body part that you have described.
It's a silva. Itself.

Hercules beetle.

It has a silva hill. Sticky tentacles.

And it has a R-X-T-A.

1st and 2nd silva.

The silva cephs the keeps.

Wings. Stiff. Black.

Swallower it has a elastic stomach.
He eats animals that are bigger than him.

My favorite is the black swallowtail because it has a elastic stomach and stretches.
puffer

fish

spines
Hercules Beetle.
BLACK SWALLOWER

ELASTIC STOMACH
