

**DCI: From Molecules to Organisms: Structures and Processes****MS.LS1.B: Growth and Development of Organisms**

Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring. (MS-LS3-2)

**DCI: Heredity: Inheritance and Variation of Traits****MS.LS3.A: Inheritance of Traits**

Genes are located in the chromosomes of cells, with each chromosome pair containing two variants of each of many distinct genes. Each distinct gene chiefly controls the production of specific proteins, which in turn affects the traits of the individual. Changes (mutations) to genes can result in changes to proteins, which can affect the structures and functions of the organism and thereby change traits. (MS-LS3-1)

**DCI: Heredity: Inheritance and Variation of Traits****MS.LS3.A: Inheritance of Traits**

Variations of inherited traits between parent and offspring arise from genetic differences that result from the subset of chromosomes (and therefore genes) inherited. (MS-LS3-2)

**DCI: Heredity: Inheritance and Variation of Traits****MS.LS3.B: Variation of Traits**

In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. Individuals have two of each chromosome and hence two alleles of each gene, one acquired from each parent. These versions may be identical or may differ from each other. (MS-LS3-2)

**DCI: Heredity: Inheritance and Variation of Traits****MS.LS3.B: Variation of Traits**

In addition to variations that arise from sexual reproduction, genetic information can be altered because of mutations. Though rare, mutations may result in changes to the structure and function of proteins. Some changes are beneficial, others harmful, and some neutral to the organism. (MS-LS3-1)

**DCI: From Molecules to Organisms: Structures and Processes****MS.LS1.A: Structure and Function**

All living things are made up of cells, which is the smallest unit that can be said to be alive. An organism may consist of one single cell (unicellular) or many different numbers and types of cells (multicellular). (MS-LS1-1)

**DCI: From Molecules to Organisms: Structures and Processes****MS.LS1.A: Structure and Function**

Within cells, special structures are responsible for particular functions, and the cell membrane forms the boundary that controls what enters and leaves the cell. (MS-LS1-2)

**DCI: From Molecules to Organisms: Structures and Processes****MS.LS1.A: Structure and Function**

In multicellular organisms, the body is a system of multiple interacting subsystems. These subsystems are groups of cells that work together to form tissues and organs that are specialized for particular body functions. (MS-LS1-3)

**DCI: Biological Evolution: Unity and Diversity****MS.LS4.A: Evidence of Common Ancestry and Diversity**

The collection of fossils and their placement in chronological order (e.g., through the location of the sedimentary layers in which they are found or through radioactive dating) is known as the fossil record. It documents the existence, diversity, extinction, and change of many life forms throughout the history of life on Earth. (MS-LS4-1)

**DCI: Biological Evolution: Unity and Diversity**

**MS.LS4.A: Evidence of Common Ancestry and Diversity**

Anatomical similarities and differences between various organisms living today and between them and organisms in the fossil record, enable the reconstruction of evolutionary history and the inference of lines of evolutionary descent. (MS-LS4-2)

**DCI: Biological Evolution: Unity and Diversity**

**MS.LS4.A: Evidence of Common Ancestry and Diversity**

Comparison of the embryological development of different species also reveals similarities that show relationships not evident in the fully-formed anatomy. (MS-LS4-3)

**Performance Expectation**

**MS-LS3-1: Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the organism.**

**Clarification Statement:** Emphasis is on conceptual understanding that changes in genetic material may result in making different proteins.

**Assessment Boundary:** Assessment does not include specific changes at the molecular level, mechanisms for protein synthesis, or specific types of mutations.

### **Performance Expectation**

**MS-LS3-2: Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation.**

**Clarification Statement:** Emphasis is on using models such as Punnett squares, diagrams, and simulations to describe the cause and effect relationship of gene transmission from parent(s) to offspring and resulting genetic variation.

**Assessment Boundary:** none

### **Performance Expectation**

**MS-LS1-1: Conduct an investigation to provide evidence that living things are made of cells; either one cell or many different numbers and types of cells.**

**Clarification Statement:** Emphasis is on developing evidence that living things are made of cells, distinguishing between living and non-living things, and understanding that living things may be made of one cell or many and varied cells.

**Assessment Boundary:** none

### **Performance Expectation**

**MS-LS1-2: Develop and use a model to describe the function of a cell as a whole and ways parts of cells contribute to the function.**

**Clarification Statement:** Emphasis is on the cell functioning as a whole system and the primary role of identified parts of the cell, specifically the nucleus, chloroplasts, mitochondria, cell membrane, and cell wall.

**Assessment Boundary:** Assessment of organelle structure/function relationships is limited to the cell wall and cell membrane. Assessment of the function of the other organelles is limited to their relationship to the whole cell. Assessment does not include the biochemical function of cells or cell parts.

### Performance Expectation

**MS-LS1-3: Use argument supported by evidence for how the body is a system of interacting subsystems composed of groups of cells.**

**Clarification Statement:** Emphasis is on the conceptual understanding that cells form tissues and tissues form organs specialized for particular body functions. Examples could include the interaction of subsystems within a system and the normal functioning of those systems.

**Assessment Boundary:** Assessment does not include the mechanism of one body system independent of others. Assessment is limited to the circulatory, excretory, digestive, respiratory, muscular, and nervous systems.

### Performance Expectation

**MS-LS4-1: Analyze and interpret data for patterns in the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth under the assumption that natural laws operate today as in the past.**

**Clarification Statement:** Emphasis is on finding patterns of changes in the level of complexity of anatomical structures in organisms and the chronological order of fossil appearance in the rock layers.

**Assessment Boundary:** Assessment does not include the names of individual species or geological eras in the fossil record.

### Performance Expectation

**MS-LS4-2: Apply scientific ideas to construct an explanation for the anatomical similarities and differences among modern organisms and between modern and fossil organisms to infer evolutionary relationships.**

**Clarification Statement:** Emphasis is on explanations of the evolutionary relationships among organisms in terms of similarity or differences of the gross appearance of anatomical structures.

**Assessment Boundary:** none

### Performance Expectation

**MS-LS4-3: Analyze displays of pictorial data to compare patterns of similarities in the embryological development across multiple species to identify relationships not evident in the fully formed anatomy.**

**Clarification Statement:** Emphasis is on inferring general patterns of relatedness among embryos of different organisms by comparing the macroscopic appearance of diagrams or pictures.

**Assessment Boundary:** Assessment of comparisons is limited to gross appearance of anatomical structures in embryological development.

### Science and Engineering Practices

#### Developing and Using Models

Modeling in 6–8 builds on K–5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

Develop and use a model to describe phenomena. (MS-LS3-1), (MS-LS3-2)

### Science and Engineering Practices

#### Planning and Carrying Out Investigations

Planning and carrying out investigations to answer questions or test solutions to problems in 6–8 builds on K–5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or design solutions.

Conduct an investigation to produce data to serve as the basis for evidence that meet the goals of an investigation. (MS-LS1-1)

## Science and Engineering Practices

### Developing and Using Models

Modeling in 6–8 builds on K–5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

**Develop a model to describe phenomena. (MS-LS1-2)**

## Science and Engineering Practices

### Engaging in Argument from Evidence

Engaging in argument from evidence in 6–8 builds on K–5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world(s).

**Use an oral and written argument supported by evidence to support or refute an explanation or a model for a phenomenon. (MS-LS1-3)**

## Science and Engineering Practices

### Analyzing and Interpreting Data

Analyzing data in 6–8 builds on K–5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

**Analyze and interpret data to determine similarities and differences in findings. (MS-LS4-1)**

## Science and Engineering Practices

### Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6–8 builds on K–5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

Apply scientific ideas to construct an explanation for real-world phenomena, examples, or events. (MS-LS4-2)

## Science and Engineering Practices

### Analyzing and Interpreting Data

Analyzing data in 6–8 builds on K–5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

Analyze displays of data to identify linear and nonlinear relationships. (MS-LS4-3)

## Crosscutting Concepts

### Cause and Effect

Cause and effect relationships may be used to predict phenomena in natural systems. (MS-LS3-2)

## Crosscutting Concepts

### Structure and Function

Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the shapes, composition, and relationships among its parts, therefore complex natural structures/systems can be analyzed to determine how they function. (MS-LS3-1)

## Crosscutting Concepts

### Scale, Proportion, and Quantity

Phenomena that can be observed at one scale may not be observable at another scale. (MS-LS1-1)

## Crosscutting Concepts

### Structure and Function

Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the relationships among its parts, therefore complex natural structures/systems can be analyzed to determine how they function. (MS-LS1-2)

### Crosscutting Concepts

#### **Systems and System Models**

Systems may interact with other systems; they may have subsystems and be a part of larger complex systems. (MS-LS1-3)

### Crosscutting Concepts

#### **Patterns**

Graphs, charts, and images can be used to identify patterns in data. (MS-LS4-1)

### Crosscutting Concepts

#### **Patterns**

Patterns can be used to identify cause-and-effect relationships. (MS-LS4-2)

## Crosscutting Concepts

### Patterns

Graphs, charts, and images can be used to identify patterns in data.  
(MS-LS4-3)

## Connections to Engineering, Technology, and Applications of Science

### Science Knowledge Is Based on Empirical Evidence

Science knowledge is based upon logical and conceptual connections between evidence and explanations. (MS-LS4-1)

## Connections to Engineering, Technology, and Applications of Science

### Science Is a Human Endeavor

Scientists and engineers are guided by habits of mind such as intellectual honesty, tolerance of ambiguity, skepticism, and openness to new ideas. (MS-LS1-3)

## Connections to Engineering, Technology, and Applications of Science

### **Scientific Knowledge Assumes an Order and Consistency in Natural Systems**

Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation. (MS-LS4-1)

## Connections to Engineering, Technology, and Applications of Science

### **Scientific Knowledge Assumes an Order and Consistency in Natural Systems**

Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation. (MS-LS4-2)

## Connections to Engineering, Technology, and Applications of Science

### **Interdependence of Science, Engineering, and Technology**

Engineering advances have led to important discoveries in virtually every field of science and scientific discoveries have led to the development of entire industries and engineered systems. (MS-LS1-1)

**Common Core State Standards for ELA/Literacy**

**Reading in Science**

**RST.6-8.1 - Key Ideas and Details**

Cite specific textual evidence to support analysis of science and technical texts. (MS-LS3-1), (MS-LS3-2)

**Common Core State Standards for ELA/Literacy**

**Reading in Science**

**RST.6-8.4 - Craft and Structure**

Determine the meaning of symbols, key terms, and other domain-specific words and phrases as they are used in a specific scientific or technical context relevant to grades 6–8 texts and topics. (MS-LS3-1), (MS-LS3-2)

**Common Core State Standards for ELA/Literacy**

**Reading in Science**

**RST.6-8.7 - Integration of Knowledge and Ideas**

Integrate quantitative or technical information expressed in words in a text with a version of that information expressed visually (e.g., in a flowchart, diagram, model, graph, or table). (MS-LS3-1), (MS-LS3-2)

**Common Core State Standards for ELA/Literacy**

**Speaking & Listening**

**SL.8.5 - Presentation of Knowledge and Ideas**

Integrate multimedia and visual displays into presentations to clarify information, strengthen claims and evidence, and add interest. (MS-LS3-1), (MS-LS3-2)

**Common Core State Standards for Mathematics**

**Statistics & Probability**

**6.SP.B.5 - Summarize and describe distributions.**

Summarize numerical data sets in relation to their context. (MS-LS3-2)

**Common Core State Standards for Mathematics**

**Mathematical Practices**

**MP.4 - Model with mathematics**

Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. A student might apply proportional reasoning to plan a school event or analyze a problem in the community. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose. (MS-LS3-2)
