

**Disciplinary Core Idea**

**MS.LS4.A: Evidence of Common Ancestry and Diversity**

The collection of fossils and their placement in chronological order (e.g., through the location of the sedimentary layers in which they are found or through radioactive dating) is known as the fossil record. It documents the existence, diversity, extinction, and change of many life forms throughout the history of life on Earth. (MS-LS4-1)

**Disciplinary Core Idea**

**MS.LS4.A: Evidence of Common Ancestry and Diversity**

Anatomical similarities and differences between various organisms living today and between them and organisms in the fossil record, enable the reconstruction of evolutionary history and the inference of lines of evolutionary descent. (MS-LS4-2)

**Disciplinary Core Idea**

**MS.LS4.A: Evidence of Common Ancestry and Diversity**

Comparison of the embryological development of different species also reveals similarities that show relationships not evident in the fully-formed anatomy. (MS-LS4-3)

**Disciplinary Core Idea**

**MS.LS4.B: Natural Selection**

Natural selection leads to the predominance of certain traits in a population, and the suppression of others. (MS-LS4-4)

**Disciplinary Core Idea**

**MS.LS4.C: Adaptation**

Adaptation by natural selection acting over generations is one important process by which species change over time in response to changes in environmental conditions. Traits that support successful survival and reproduction in the new environment become more common; those that do not become less common. Thus, the distribution of traits in a population changes. (MS-LS4-6)

**Disciplinary Core Idea**

**MS.LS2.A: Interdependent Relationships in Ecosystems**

Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with non-living factors. (MS-LS2-1)

**Disciplinary Core Idea**

**MS.LS2.A: Interdependent Relationships in Ecosystems**

In any ecosystem, organisms and populations with similar requirements for food, water, oxygen, or other resources may compete with each other for limited resources, access to which consequently constrains their growth and reproduction. (MS-LS2-1)

**Disciplinary Core Idea**

**MS.LS2.A: Interdependent Relationships in Ecosystems**

Growth of organisms and population increases are limited by access to resources. (MS-LS2-1)

**Disciplinary Core Idea**

**MS.LS2.A: Interdependent Relationships in Ecosystems**

Similarly, predatory interactions may reduce the number of organisms or eliminate whole populations of organisms. Mutually beneficial interactions, in contrast, may become so interdependent that each organism requires the other for survival. Although the species involved in these competitive, predatory, and mutually beneficial interactions vary across ecosystems, the patterns of interactions of organisms with their environments, both living and nonliving, are shared. (MS-LS2-2)

**Disciplinary Core Idea**

**MS.LS2.C: Ecosystem Dynamics, Functioning, and Resilience**

Ecosystems are dynamic in nature; their characteristics can vary over time. Disruptions to any physical or biological component of an ecosystem can lead to shifts in all its populations. (MS-LS2-4)

**Disciplinary Core Idea**

**MS.LS3.A: Inheritance of Traits**

Genes are located in the chromosomes of cells, with each chromosome pair containing two variants of each of many distinct genes. Each distinct gene chiefly controls the production of specific proteins, which in turn affects the traits of the individual. Changes (mutations) to genes can result in changes to proteins, which can affect the structures and functions of the organism and thereby change traits. (MS-LS3-1)

**Disciplinary Core Idea**

**MS.LS3.B: Variation of Traits**

In addition to variations that arise from sexual reproduction, genetic information can be altered because of mutations. Though rare, mutations may result in changes to the structure and function of proteins. Some changes are beneficial, others harmful, and some neutral to the organism. (MS-LS3-1)

**Disciplinary Core Idea**

**MS.LS1.B: Growth and Development of Organisms**

Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring. (MS-LS3-2)

**Disciplinary Core Idea**

**MS.LS3.A: Inheritance of Traits**

Variations of inherited traits between parent and offspring arise from genetic differences that result from the subset of chromosomes (and therefore genes) inherited. (MS-LS3-2)

**Disciplinary Core Idea**

**MS.LS3.B: Variation of Traits**

In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. Individuals have two of each chromosome and hence two alleles of each gene, one acquired from each parent. These versions may be identical or may differ from each other. (MS-LS3-2)

**Disciplinary Core Idea**

**MS.ESS1.C: The History of Planet Earth**

Tectonic processes continually generate new ocean sea floor at ridges and destroy old sea floor at trenches. (MS-ESS2-3)

**Disciplinary Core Idea**

**MS.ESS2.B: Plate Tectonics and Large-Scale System Interactions**

Maps of ancient land and water patterns, based on investigations of rocks and fossils, make clear how Earth's plates have moved great distances, collided, and spread apart. (MS-ESS2-3)

**Disciplinary Core Idea**

**MS.ESS1.C: The History of Planet Earth**

The geologic time scale interpreted from rock strata provides a way to organize Earth's history. Analyses of rock strata and the fossil record provide only relative dates, not an absolute scale. (MS-ESS1-4)

**Disciplinary Core Idea**

**MS.LS2.C: Ecosystem Dynamics, Functioning, and Resilience**

Biodiversity describes the variety of species found in Earth's terrestrial and oceanic ecosystems. The completeness or integrity of an ecosystem's biodiversity is often used as a measure of its health.

(MS-LS2-5)

**Disciplinary Core Idea**

**MS.LS4.D: Biodiversity and Humans**

Changes in biodiversity can influence humans' resources, such as food, energy, and medicines, as well as ecosystem services that humans rely on—for example, water purification and recycling. (MS-LS2-5)

**Disciplinary Core Idea**

**MS.ETS1.B: Developing Possible Solutions**

There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem. (MS-LS2-5)

### Performance Expectation

**MS-LS4-1: Analyze and interpret data for patterns in the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth under the assumption that natural laws operate today as in the past.**

**Clarification Statement:** Emphasis is on finding patterns of changes in the level of complexity of anatomical structures in organisms and the chronological order of fossil appearance in the rock layers.

**Assessment Boundary:** Assessment does not include the names of individual species or geological eras in the fossil record.

### Performance Expectation

**MS-LS4-2: Apply scientific ideas to construct an explanation for the anatomical similarities and differences among modern organisms and between modern and fossil organisms to infer evolutionary relationships.**

**Clarification Statement:** Emphasis is on explanations of the evolutionary relationships among organisms in terms of similarity or differences of the gross appearance of anatomical structures.

**Assessment Boundary:** none

### Performance Expectation

**MS-LS4-3: Analyze displays of pictorial data to compare patterns of similarities in the embryological development across multiple species to identify relationships not evident in the fully formed anatomy.**

**Clarification Statement:** Emphasis is on inferring general patterns of relatedness among embryos of different organisms by comparing the macroscopic appearance of diagrams or pictures.

**Assessment Boundary:** Assessment of comparisons is limited to gross appearance of anatomical structures in embryological development.

**Performance Expectation**

**MS-LS4-4: Construct an explanation based on evidence that describes how genetic variations of traits in a population increase some individuals' probability of surviving and reproducing in a specific environment.**

**Clarification Statement:** Emphasis is on using simple probability statements and proportional reasoning to construct explanations.

**Assessment Boundary:** none

**Performance Expectation**

**MS-LS4-6: Use mathematical representations to support explanations of how natural selection may lead to increases and decreases of specific traits in populations over time.**

**Clarification Statement:** Emphasis is on using mathematical models, probability statements, and proportional reasoning to support explanations of trends in changes to populations over time.

**Assessment Boundary:** Assessment does not include Hardy Weinberg calculations.

**Performance Expectation**

**MS-LS2-1: Analyze and interpret data to provide evidence for the effects of resource availability on organisms and populations of organisms in an ecosystem.**

**Clarification Statement:** Emphasis is on cause and effect relationships between resources and growth of individual organisms and the numbers of organisms in ecosystems during periods of abundant and scarce resources.

**Assessment Boundary:** none

### Performance Expectation

**MS-LS2-2: Construct an explanation that predicts patterns of interactions among organisms across multiple ecosystems.**

**Clarification Statement:** Emphasis is on predicting consistent patterns of interactions in different ecosystems in terms of the relationships among and between organisms and abiotic components of ecosystems. Examples of types of interactions could include competitive, predatory, and mutually beneficial.

**Assessment Boundary:** none

### Performance Expectation

**MS-LS2-4: Construct an argument supported by empirical evidence that changes to physical or biological components of an ecosystem affect populations.**

**Clarification Statement:** Emphasis is on recognizing patterns in data and making warranted inferences about changes in populations, and on evaluating empirical evidence supporting arguments about changes to ecosystems.

**Assessment Boundary:** none

### Performance Expectation

**MS-LS3-1: Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the organism.**

**Clarification Statement:** Emphasis is on conceptual understanding that changes in genetic material may result in making different proteins.

**Assessment Boundary:** Assessment does not include specific changes at the molecular level, mechanisms for protein synthesis, or specific types of mutations.

### Performance Expectation

**MS-LS3-2: Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation.**

**Clarification Statement:** Emphasis is on using models such as Punnett squares, diagrams, and simulations to describe the cause and effect relationship of gene transmission from parent(s) to offspring and resulting genetic variation.

**Assessment Boundary:** none

### Performance Expectation

**MS-ESS2-3: Analyze and interpret data on the distribution of fossils and rocks, continental shapes, and seafloor structures to provide evidence of the past plate motions.**

**Clarification Statement:** Examples of data include similarities of rock and fossil types on different continents, the shapes of the continents (including continental shelves), and the locations of ocean structures (such as ridges, fracture zones, and trenches).

**Assessment Boundary:** Paleomagnetic anomalies in oceanic and continental crust are not assessed.

### Performance Expectation

**MS-ESS1-4: Construct a scientific explanation based on evidence from rock strata for how the geologic time scale is used to organize Earth's 4.6-billion-year-old history.**

**Clarification Statement:** Emphasis is on how analyses of rock formations and the fossils they contain are used to establish relative ages of major events in Earth's history. Examples of Earth's major events could range from being very recent (such as the last Ice Age or the earliest fossils of homo sapiens) to very old (such as the formation of Earth or the earliest evidence of life). Examples can include the formation of mountain chains and ocean basins, the evolution or extinction of particular living organisms, or significant volcanic eruptions.

**Assessment Boundary:** Assessment does not include recalling the names of specific periods or epochs and events within them.

### Performance Expectation

#### **MS-LS2-5: Evaluate competing design solutions for maintaining biodiversity and ecosystem services.\***

**Clarification Statement:** Examples of ecosystem services could include water purification, nutrient recycling, and prevention of soil erosion. Examples of design solution constraints could include scientific, economic, and social considerations.

**Assessment Boundary:** none

\* This performance expectation integrates traditional science content with engineering through a practice or disciplinary core idea.

### Science and Engineering Practice

#### **Analyzing and Interpreting Data**

Analyzing data in 6–8 builds on K–5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

Analyze displays of data to identify linear and nonlinear relationships. (MS-LS4-3)

### Science and Engineering Practice

#### **Analyzing and Interpreting Data**

Analyzing data in 6–8 builds on K–5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

Analyze and interpret data to determine similarities and differences in findings. (MS-LS4-1)

## Science and Engineering Practice

### Using Mathematics and Computational Thinking

Mathematical and computational thinking at the 6–8 level builds on K–5 experiences and progresses to identifying patterns in large data sets and using mathematical concepts to support explanations and arguments.

**Use mathematical representations to support scientific conclusions and design solutions.** (MS-LS4-6)

## Science and Engineering Practice

### Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6–8 builds on K–5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

**Construct an explanation that includes qualitative or quantitative relationships between variables that describe phenomena.** (MS-LS4-4)

## Science and Engineering Practice

### Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6–8 builds on K–5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

**Apply scientific ideas to construct an explanation for real-world phenomena, examples, or events.** (MS-LS4-2)

## Science and Engineering Practice

### Analyzing and Interpreting Data

Analyzing data in 6–8 builds on K–5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

**Analyze and interpret data to provide evidence for phenomena.** (MS-LS2-1)

## Science and Engineering Practice

### Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6–8 builds on K–5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

**Construct an explanation that includes qualitative or quantitative relationships between variables that predict phenomena.** (MS-LS2-2)

## Science and Engineering Practice

### Engaging in Argument from Evidence

Engaging in argument from evidence in 6–8 builds on K–5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world(s).

**Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem.** (MS-LS2-4)

## Science and Engineering Practice

### Developing and Using Models

Modeling in 6–8 builds on K–5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

**Develop and use a model to describe phenomena.** (MS-LS3-1)

## Science and Engineering Practice

### Developing and Using Models

Modeling in 6–8 builds on K–5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

**Develop and use a model to describe phenomena.** (MS-LS3-2)

## Science and Engineering Practice

### Analyzing and Interpreting Data

Analyzing data in 6–8 builds on K–5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

**Analyze and interpret data to provide evidence for phenomena.** (MS-ESS2-3)

## Science and Engineering Practice

### Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6–8 builds on K–5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students' own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future. (MS-ESS1-4)

## Science and Engineering Practice

### Engaging in Argument from Evidence

Engaging in argument from evidence in 6–8 builds on K–5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world(s).

Evaluate competing design solutions based on jointly developed and agreed-upon design criteria. (MS-LS2-5)

## Crosscutting Concept

### Patterns

Graphs, charts, and images can be used to identify patterns in data. (MS-LS4-1), (MS-LS4-3)

### Crosscutting Concept

#### Patterns

Patterns can be used to identify cause-and-effect relationships. (MS-LS4-2)

### Crosscutting Concept

#### Cause and Effect

Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability. (MS-LS4-4), (MS-LS4-6)

### Crosscutting Concept

#### Cause and Effect

Cause and effect relationships may be used to predict phenomena in natural or designed systems. (MS-LS2-1)

### Crosscutting Concept

#### **Patterns**

Patterns can be used to identify cause-and-effect relationships. (MS-LS2-2)

### Crosscutting Concept

#### **Stability and Change**

Small changes in one part of a system might cause large changes in another part. (MS-LS2-4)

### Crosscutting Concept

#### **Structure and Function**

Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the shapes, composition, and relationships among its parts, therefore complex natural structures/systems can be analyzed to determine how they function. (MS-LS3-1)

### Crosscutting Concept

#### **Cause and Effect**

Cause and effect relationships may be used to predict phenomena in natural systems. (MS-LS3-2)

### Crosscutting Concept

#### **Patterns**

Patterns in rates of change and other numerical relationships can provide information about natural systems. (MS-ESS2-3)

### Crosscutting Concept

#### **Scale, Proportion, and Quantity**

Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small. (MS-ESS1-4)

### Crosscutting Concept

#### **Stability and Change**

Small changes in one part of a system might cause large changes in another part. (MS-LS2-5)

### Connection to Nature of Science

#### **Science Knowledge Is Based on Empirical Evidence**

Science knowledge is based upon logical and conceptual connections between evidence and explanations. (MS-LS4-1)

### Connection to Nature of Science

#### **Scientific Knowledge Assumes an Order and Consistency in Natural Systems**

Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation. (MS-LS4-1), (MS-LS4-2)

**Connection to Engineering, Technology, and Applications of Science**

**Science Knowledge Is Based on Empirical Evidence**

Science disciplines share common rules of obtaining and evaluating empirical evidence. (MS-LS2-4)

**Connection to Engineering, Technology, and Applications of Science**

**Scientific Knowledge Is Open to Revision in Light of New Evidence**

Science findings are frequently revised and/or reinterpreted based on new evidence. (MS-ESS2-3)

**Connection to Engineering, Technology, and Applications of Science**

**Science Addresses Questions About the Natural and Material World**

Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes. (MS-LS2-5)

## Connection to Engineering, Technology, and Applications of Science

### **Influence of Science, Engineering, and Technology on Society and the Natural World**

The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region and over time. (MS-LS2-5)

## Common Core State Standards for ELA/Literacy

### **Reading in Science**

#### **RST.6-8.1 - Key Ideas and Details**

Cite specific textual evidence to support analysis of science and technical texts. (MS-LS4-1), (MS-LS4-2), (MS-LS4-3)

## Common Core State Standards for ELA/Literacy

### **Reading in Science**

#### **RST.6-8.7 - Integration of Knowledge and Ideas**

Integrate quantitative or technical information expressed in words in a text with a version of that information expressed visually (e.g., in a flowchart, diagram, model, graph, or table). (MS-LS4-1), (MS-LS4-3)

**Common Core State Standards for ELA/Literacy**

**Reading in Science**

**RST.6-8.9 - Integration of Knowledge and Ideas**

Compare and contrast the information gained from experiments, simulations, video, or multimedia sources with that gained from reading a text on the same topic. (MS-LS4-3), (MS-LS4-4)

**Common Core State Standards for ELA/Literacy**

**Speaking & Listening**

**SL.8.1 - Comprehension and Collaboration**

Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 8 topics, texts, and issues, building on others' ideas and expressing their own clearly. (MS-LS4-2), (MS-LS4-4)

**Common Core State Standards for ELA/Literacy**

**Speaking & Listening**

**SL.8.4 - Presentation of Knowledge and Ideas**

Present claims and findings, emphasizing salient points in a focused, coherent manner with relevant evidence, sound valid reasoning, and well-chosen details; use appropriate eye contact, adequate volume, and clear pronunciation. (MS-LS4-2), (MS-LS4-4)

**Common Core State Standards for ELA/Literacy**

**Writing in Science**

**WHST.6-8.2 - Text Types and Purposes**

Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes. (MS-LS4-2), (MS-LS4-4)

**Common Core State Standards for ELA/Literacy**

**Writing in Science**

**WHST.6-8.9 - Research to Build and Present Knowledge**

Draw evidence from informational texts to support analysis reflection, and research. (MS-LS4-2), (MS-LS4-4)

**Common Core State Standards for Mathematics**

**Expressions & Equations**

**6.EE.B.6 - Reason about and solve one-variable equations and inequalities.**

Use variables to represent numbers and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set. (MS-LS4-1), (MS-LS4-2)

**Common Core State Standards for Mathematics**

**Ratios & Proportional Relationships**

**6.RP.A.1 - Understand ratio concepts and use ratio reasoning to solve problems.**

Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. (MS-LS4-4), (MS-LS4-6)

**Common Core State Standards for Mathematics**

**Statistics & Probability**

**6.SP.B.5 - Summarize and describe distributions.**

Summarize numerical data sets in relation to their context. (MS-LS4-4), (MS-LS4-6)

**Common Core State Standards for Mathematics**

**Ratios & Proportional Relationships**

**7.RP.A.2 - Analyze proportional relationships and use them to solve real-world and mathematical problems.**

Recognize and represent proportional relationships between quantities. (MS-LS4-4), (MS-LS4-6)

**Common Core State Standards for Mathematics**

**Mathematical Practices**

**MP.4 - Model with mathematics**

Model with mathematics. (MS-LS4-6)
