

**Disciplinary Core Idea**

**MS.ESS1.A: The Universe and Its Stars**

Patterns of the apparent motion of the sun, the moon, and stars in the sky can be observed, described, predicted, and explained with models. (MS-ESS1-1)

**Disciplinary Core Idea**

**MS.ESS1.A: The Universe and Its Stars**

Earth and its solar system are part of the Milky Way galaxy, which is one of many galaxies in the universe. (MS-ESS1-2)

**Disciplinary Core Idea**

**MS.ESS1.B: Earth and the Solar System**

The solar system consists of the sun and a collection of objects, including planets, their moons, and asteroids that are held in orbit around the sun by its gravitational pull on them. (MS-ESS1-2), (MS-ESS1-3)

**Disciplinary Core Idea****MS.ESS1.B: Earth and the Solar System**

This model of the solar system can explain eclipses of the sun and the moon. Earth's spin axis is fixed in direction over the short-term but tilted relative to its orbit around the sun. The seasons are a result of that tilt and are caused by the differential intensity of sunlight on different areas of Earth across the year. (MS-ESS1-1)

**Disciplinary Core Idea****MS.ESS1.B: Earth and the Solar System**

The solar system appears to have formed from a disk of dust and gas, drawn together by gravity. (MS-ESS1-2)

**Disciplinary Core Idea****MS.PS2.A: Forces and Motion**

For any pair of interacting objects, the force exerted by the first object on the second object is equal in strength to the force that the second object exerts on the first, but in the opposite direction (Newton's third law). (MS-PS2-1)

#### Disciplinary Core Idea

##### **MS.PS2.A: Forces and Motion**

The motion of an object is determined by the sum of the forces acting on it; if the total force on the object is not zero, its motion will change. The greater the mass of the object, the greater the force needed to achieve the same change in motion. For any given object, a larger force causes a larger change in motion. (MS-PS2-2)

#### Disciplinary Core Idea

##### **MS.PS2.A: Forces and Motion**

All positions of objects and the directions of forces and motions must be described in an arbitrarily chosen reference frame and arbitrarily chosen units of size. In order to share information with other people, these choices must also be shared. (MS-PS2-2)

#### Disciplinary Core Idea

##### **MS.PS2.B: Types of Interactions**

Electric and magnetic (electromagnetic) forces can be attractive or repulsive, and their sizes depend on the magnitudes of the charges, currents, or magnetic strengths involved and on the distances between the interacting objects. (MS-PS2-3)

**Disciplinary Core Idea**

**MS.PS2.B: Types of Interactions**

Gravitational forces are always attractive. There is a gravitational force between any two masses, but it is very small except when one or both of the objects have large mass—e.g., Earth and the sun. (MS-PS2-4)

**Disciplinary Core Idea**

**MS.PS2.B: Types of Interactions**

Forces that act at a distance (electric, magnetic, and gravitational) can be explained by fields that extend through space and can be mapped by their effect on a test object (a charged object, or a ball, respectively). (MS-PS2-5)

**Disciplinary Core Idea**

**MS.ESS2.A: Earth Materials and Systems**

All Earth processes are the result of energy flowing and matter cycling within and among the planet's systems. This energy is derived from the sun and Earth's hot interior. The energy that flows and matter that cycles produce chemical and physical changes in Earth's materials and living organisms. (MS-ESS2-1)

**Disciplinary Core Idea**

**MS.ESS2.A: Earth Materials and Systems**

The planet's systems interact over scales that range from microscopic to global in size, and they operate over fractions of a second to billions of years. These interactions have shaped Earth's history and will determine its future. (MS-ESS2-2)

**Disciplinary Core Idea**

**MS.ESS2.C: The Roles of Water in Earth's Surface Processes**

Water's movements—both on the land and underground—cause weathering and erosion, which change the land's surface features and create underground formations. (MS-ESS2-2)

**Performance Expectation**

**MS-ESS1-1: Develop and use a model of the Earth-sun-moon system to describe the cyclic patterns of lunar phases, eclipses of the sun and moon, and seasons.**

**Clarification Statement:** Examples of models can be physical, graphical, or conceptual.

**Assessment Boundary:** none

### Performance Expectation

#### **MS-ESS1-2: Develop and use a model to describe the role of gravity in the motions within galaxies and the solar system.**

**Clarification Statement:** Emphasis for the model is on gravity as the force that holds together the solar system and Milky Way galaxy and controls orbital motions within them. Examples of models can be physical (such as the analogy of distance along a football field or computer visualizations of elliptical orbits) or conceptual (such as mathematical proportions relative to the size of familiar objects such as students' school or state).

**Assessment Boundary:** Assessment does not include Kepler's Laws of orbital motion or the apparent retrograde motion of the planets as viewed from Earth.

### Performance Expectation

#### **MS-ESS1-3: Analyze and interpret data to determine scale properties of objects in the solar system.**

**Clarification Statement:** Emphasis is on the analysis of data from Earth-based instruments, space-based telescopes, and spacecraft to determine similarities and differences among solar system objects. Examples of scale properties include the sizes of an object's layers (such as crust and atmosphere), surface features (such as volcanoes), and orbital radius. Examples of data include statistical information, drawings and photographs, and models.

**Assessment Boundary:** Assessment does not include recalling facts about properties of the planets and other solar system bodies.

### Performance Expectation

#### **MS-PS2-1: Apply Newton's Third Law to design a solution to a problem involving the motion of two colliding objects.\***

**Clarification Statement:** Examples of practical problems could include the impact of collisions between two cars, between a car and stationary objects, and between a meteor and a space vehicle.

**Assessment Boundary:** Assessment is limited to vertical or horizontal interactions in one dimension.

\* This performance expectation integrates traditional science content with engineering through a practice or disciplinary core idea.

### Performance Expectation

**MS-PS2-2: Plan an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object.**

**Clarification Statement:** Emphasis is on balanced (Newton's First Law) and unbalanced forces in a system, qualitative comparisons of forces, mass and changes in motion (Newton's Second Law), frame of reference, and specification of units.

**Assessment Boundary:** Assessment is limited to forces and changes in motion in one-dimension in an inertial reference frame and to change in one variable at a time. Assessment does not include the use of trigonometry.

### Performance Expectation

**MS-PS2-3: Ask questions about data to determine the factors that affect the strength of electric and magnetic forces.**

**Clarification Statement:** Examples of devices that use electric and magnetic forces could include electromagnets, electric motors, or generators. Examples of data could include the effect of the number of turns of wire on the strength of an electromagnet, or the effect of increasing the number or strength of magnets on the speed of an electric motor.

**Assessment Boundary:** Assessment about questions that require quantitative answers is limited to proportional reasoning and algebraic thinking.

### Performance Expectation

**MS-PS2-4: Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects.**

**Clarification Statement:** Examples of evidence for arguments could include data generated from simulations or digital tools; and charts displaying mass, strength of interaction, distance from the Sun, and orbital periods of objects within the solar system.

**Assessment Boundary:** Assessment does not include Newton's Law of Gravitation or Kepler's Laws.

### Performance Expectation

**MS-PS2-5: Conduct an investigation and evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.**

**Clarification Statement:** Examples of this phenomenon could include the interactions of magnets, electrically-charged strips of tape, and electrically-charged pith balls. Examples of investigations could include first-hand experiences or simulations.

**Assessment Boundary:** Assessment is limited to electric and magnetic fields, and limited to qualitative evidence for the existence of fields.

### Performance Expectation

**MS-ESS2-1: Develop a model to describe the cycling of Earth's materials and the flow of energy that drives this process.**

**Clarification Statement:** Emphasis is on the processes of melting, crystallization, weathering, deformation, and sedimentation, which act together to form minerals and rocks through the cycling of Earth's materials.

**Assessment Boundary:** Assessment does not include the identification and naming of minerals.

### Performance Expectation

**MS-ESS2-2: Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.**

**Clarification Statement:** Emphasis is on how processes change Earth's surface at time and spatial scales that can be large (such as slow plate motions or the uplift of large mountain ranges) or small (such as rapid landslides or microscopic geochemical reactions), and how many geoscience processes (such as earthquakes, volcanoes, and meteor impacts) usually behave gradually but are punctuated by catastrophic events. Examples of geoscience processes include surface weathering and deposition by the movements of water, ice, and wind. Emphasis is on geoscience processes that shape local geographic features, where appropriate.

**Assessment Boundary:** none

## Science and Engineering Practice

### Developing and Using Models

Modeling in 6–8 builds on K–5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

**Develop and use a model to describe phenomena.** (MS-ESS1-1), (MS-ESS1-2)

## Science and Engineering Practice

### Analyzing and Interpreting Data

Analyzing data in 6–8 builds on K–5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

**Analyze and interpret data to determine similarities and differences in findings.** (MS-ESS1-3)

## Science and Engineering Practice

### Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6–8 builds on K–5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

**Apply scientific ideas or principles to design an object, tool, process or system.** (MS-PS2-1)

## Science and Engineering Practice

### Planning and Carrying Out Investigations

Planning and carrying out investigations to answer questions or test solutions to problems in 6–8 builds on K–5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or design solutions.

Plan an investigation individually and collaboratively, and in the design: identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how many data are needed to support a claim. (MS-PS2-2)

## Science and Engineering Practice

### Asking Questions and Defining Problems

Asking questions and defining problems in grades 6–8 builds from grades K–5 experiences and progresses to specifying relationships between variables and clarifying arguments and models.

Ask questions that can be investigated within the scope of the classroom, outdoor environment, and museums and other public facilities with available resources and, when appropriate, frame a hypothesis based on observations and scientific principles. (MS-PS2-3)

## Science and Engineering Practice

### Engaging in Argument from Evidence

Engaging in argument from evidence in 6–8 builds on K–5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world(s).

Construct and present oral and written arguments supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem. (MS-PS2-4)

## Science and Engineering Practice

### Planning and Carrying Out Investigations

Planning and carrying out investigations to answer questions or test solutions to problems in 6–8 builds on K–5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or design solutions.

Conduct an investigation and evaluate the experimental design to produce data to serve as the basis for evidence that can meet the goals of the investigation. (MS-PS2-5)

## Science and Engineering Practice

### Developing and Using Models

Modeling in 6–8 builds on K–5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

Develop and use a model to describe phenomena. (MS-ESS2-1)

## Science and Engineering Practice

### Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6–8 builds on K–5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students' own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future. (MS-ESS2-2)

### Crosscutting Concept

#### **Patterns**

Patterns can be used to identify cause-and-effect relationships. (MS-ESS1-1)

### Crosscutting Concept

#### **Scale, Proportion, and Quantity**

Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small. (MS-ESS1-3)

### Crosscutting Concept

#### **Systems and System Models**

Models can be used to represent systems and their interactions. (MS-ESS1-2)

### Crosscutting Concept

#### **Systems and System Models**

Models can be used to represent systems and their interactions—such as inputs, processes and outputs—and energy and matter flows within systems. (MS-PS2-1)

### Crosscutting Concept

#### **Stability and Change**

Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and forces at different scales. (MS-PS2-2)

### Crosscutting Concept

#### **Cause and Effect**

Cause and effect relationships may be used to predict phenomena in natural or designed systems. (MS-PS2-3)

### Crosscutting Concept

#### **Systems and System Models**

Models can be used to represent systems and their interactions—such as inputs, processes and outputs—and energy and matter flows within systems. (MS-PS2-4)

### Crosscutting Concept

#### **Cause and Effect**

Cause and effect relationships may be used to predict phenomena in natural or designed systems. (MS-PS2-5)

### Crosscutting Concept

#### **Stability and Change**

Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and processes at different scales, including the atomic scale. (MS-ESS2-1)

### Crosscutting Concept

#### **Scale, Proportion, and Quantity**

Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small. (MS-ESS2-2)

### Connection to Nature of Science

#### **Scientific Knowledge Assumes an Order and Consistency in Natural Systems**

Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation. (MS-ESS1-1), (MS-ESS1-2)

### Connection to Engineering, Technology, and Applications of Science

#### **Interdependence of Science, Engineering, and Technology**

Engineering advances have led to important discoveries in virtually every field of science and scientific discoveries have led to the development of entire industries and engineered systems. (MS-ESS1-3)

## Connection to Engineering, Technology, and Applications of Science

### **Science Knowledge Is Based on Empirical Evidence**

Science knowledge is based upon logical and conceptual connections between evidence and explanations. (MS-PS2-2)

## Connection to Engineering, Technology, and Applications of Science

### **Science Knowledge Is Based on Empirical Evidence**

Science knowledge is based upon logical and conceptual connections between evidence and explanations. (MS-PS2-4)

## Connection to Engineering, Technology, and Applications of Science

### **Influence of Science, Engineering, and Technology on Society and the Natural World**

The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. (MS-PS2-1)

**Common Core State Standards for ELA/Literacy**

**Reading in Science**

**RST.6-8.1 - Key Ideas and Details**

Cite specific textual evidence to support analysis of science and technical texts. (MS-ESS1-3)

**Common Core State Standards for ELA/Literacy**

**Reading in Science**

**RST.6-8.7 - Integration of Knowledge and Ideas**

Integrate quantitative or technical information expressed in words in a text with a version of that information expressed visually (e.g., in a flowchart, diagram, model, graph, or table). (MS-ESS1-3)

**Common Core State Standards for ELA/Literacy**

**Speaking & Listening**

**SL.8.5 - Presentation of Knowledge and Ideas**

Integrate multimedia and visual displays into presentations to clarify information, strengthen claims and evidence, and add interest. (MS-ESS1-1)

## Common Core State Standards for Mathematics

### Expressions & Equations

#### **6.EE.B.6 - Reason about and solve one-variable equations and inequalities.**

Use variables to represent numbers and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set. (MS-ESS1-2)

## Common Core State Standards for Mathematics

### Ratios & Proportional Relationships

#### **6.RP.A.1 - Understand ratio concepts and use ratio reasoning to solve problems.**

Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. (MS-ESS1-1), (MS-ESS1-2), (MS-ESS1-3)

## Common Core State Standards for Mathematics

### Expressions & Equations

#### **7.EE.B.4 - Solve real-life and mathematical problems using numerical and algebraic expressions and equations.**

Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities. (MS-ESS1-2)

**Common Core State Standards for Mathematics**

**Ratios & Proportional Relationships**

**7.RP.A.2 - Analyze proportional relationships and use them to solve real-world and mathematical problems.**

Recognize and represent proportional relationships between quantities.

(MS-ESS1-1), (MS-ESS1-2), (MS-ESS1-3)

**Common Core State Standards for Mathematics**

**Mathematical Practices**

**MP.2 - Reason abstractly and quantitatively**

Reason abstractly and quantitatively. (MS-ESS1-3)

**Common Core State Standards for Mathematics**

**Mathematical Practices**

**MP.4 - Model with mathematics**

Model with mathematics. (MS-ESS1-1), (MS-ESS1-2)
