Highlights Guide

There's so much to see in more than 40 halls! Here's a handy guide to popular exhibits.

Floor 4

Titanosaur

This cast of a juvenile sauropod is 122 feet long! The species, *Patagotitan mayorum*, was discovered in 2014 in Argentina.

Megalodon

This extinct shark's name means "big tooth." Fun fact: its bite was stronger than *T. rex*'s!

🔥 🔭 Saurischian Dinosaurs

Tyrannosaurus rex

One of the largest carnivores ever, *T. rex* was discovered on a Museum expedition. This mount, which is about 45 percent fossil, has been on view since 1915, its pose adjusted over time.

Triceratops

This famous horned dinosaur, a plant eater, replaced its 144+ teeth two to four times a lifetime.

Lestodon

This giant ground sloth, an extinct mammal from South America called *Lestodon*, is "armored" due to bony plates in its skin.

4 Advanced Mammals

Mammoth

Larger than its woolly relative, this extinct pachyderm lived in Indiana about 11,000 years ago.

Floor 3

Pacific Peoples

Moai Statue

This is a cast of a moai on Rapa Nui (Easter Island). The people of Rapa Nui made these stone statues to honor ancestors.

Collections Core

Hadrosaur Footprint

A duck-billed dinosaur likely made this impression pulling its foot out of mud 83–72 million years ago.

Reptiles and Amphibians

Komodo Dragon

One venomous bite from this Indonesian lizard, the biggest and most powerful lizard alive today, can kill its prey!

Floor 2

Theodore Roosevelt Rotunda

Barosaurus and Allosaurus

This imagined face-off features the world's tallest freestanding dinosaur mount. It's a cast because real fossils are too heavy to position in this way.

😭 African Mammals

African Elephant

African elephants are the largest living land mammals. They live in family groups of 10-20, led by the oldest female.

🤈 🛟 African Mammals

Gorilla

Carl Akeley planned this diorama in the 1920s to call attention to these extraordinary animals, which were already overhunted.

Birds of the World

King Penguin

King Penguin parents near Antarctica take turns watching over eggs and chicks, carrying them on their feet to protect them from cold.

Floor 1

Planet Earth

Climate Wall

On this dynamic exhibit, data from NASA, NOAA (National Oceanic and Atmospheric Administration), and other sources highlight vital climate indicators and effects of climate change.

North American Mammals

Alaska Brown Bear

In this iconic diorama, hungry bears fresh from hibernation get a welcome salmon, ceded by a sea otter in retreat.

Biodiversity

Spectrum of Life

This exhibit of 1,500 organisms, from amoebas to sixbanded armadillos, offers an overview of the amazing diversity of life on Earth.

Ocean Life

Blue Whale

The largest animal ever to live on our planet wasn't a dinosaur—it's the blue whale! This iconic life-size model is 94 feet long.

Ocean Life

Sperm Whale and Giant Squid

This diorama is a deep-sea encounter humans have not witnessed but deduce from whales' scars and stomach contents.

1 North American Forests

Giant Sequoia

Felled by loggers in California in 1891, the tree from which this slice was cut grew for more than 1,300 vears.

Northwest Coast

Great Canoe

Carved from a single western red cedar tree, this 63-foot canoe shows the work of both Haíłzagv and Haida artists of the Pacific Northwest.

1 🚺 Human Origins

Lucy

Here, visitors can see a cast of the 3.18-million-yearold "Lucy" fossil, which offers evidence that this species of human ancestor walked upright.

Gems and Minerals

Giant Geodes

The crystals in this dazzling pair of geodes took millions of years to turn from colorless quartz to purple amethyst.

Gems and Minerals

Star of India

This is the largest-known gem-quality star sapphire, at just over 563 carats—and it is about 2 billion years old!
