

2025 AMNH-RGGS Sexual Assault and Related Misconduct Survey – Summary of Results

The Richard Gilder Graduate School (“RGGS”) at the American Museum of Natural History (“AMNH” or “the Museum”) undertook a climate survey of students enrolled in the Comparative Biology Ph.D. Program and the Master of Arts in Teaching Earth Science Residency Program. The survey was launched via email to students on February 27, 2025, and closed on April 20, 2025. This summary is provided in accordance with New York State law and in the interest of providing information and transparency to the larger Museum community.

The goals of the survey were to better understand students’ general comprehension of concepts related to gender-based discrimination and harassment, including sexual assault and all other forms of gender-based misconduct, the Museum’s policies and procedures addressing these topics, and students’ experience with sexual misconduct. The Museum engaged an independent third-party research firm, the Yasamin Miller Group (“YMG”), to administer the survey and ensure that the raw survey data remained confidential.

Survey Population and Confidentiality

All students enrolled in the Comparative Biology Ph.D. Program as well as the Master of Arts in Teaching Earth Science Residency Program (a total of 39 students, 20 Ph.D. students and 19 MAT students, respectively) were asked to complete the voluntary and confidential survey. Of those, 15 consented and provided complete responses, giving an overall response rate of 39%. Given small sampling size for these surveys, and to protect confidentiality, YMG did not provide fine-grained analyses of specific sub-groups or the “raw data” in its originating format. As such, additional analyses on the bases of gender, sexual orientation, or other characteristics were not provided to avoid the possible identification of individual students. Instead, results are presented in the aggregate.

Survey Components

The survey asked several questions pertaining to the following topics:

- The Title IX Coordinator’s role;
- Campus policies and procedures addressing sexual assault and other forms of misconduct;
- How and where to report domestic violence, dating violence, stalking or sexual assault as a victim, survivor, or witness;
- The availability of resources on and off campus, such as counseling and academic assistance;
- The prevalence of victimization and perpetration of domestic violence, dating violence, stalking, or sexual assault on and off campus during a set time period;
- Bystander attitudes and behavior related to these topics;
- Whether students disclosed misconduct to AMNH-RGGS and/or law enforcement, experiences with reporting and institution processes, and reasons why a student did or did not report the incident(s);
- The general awareness of the difference between AMNH-RGGS’ definitions of policy violations and the definitions found in the penal law in New York State; and
- General awareness of the definition of affirmative consent.

Summary of Survey Findings

- 93% of students indicated that they received information about the AMNH-RGGS definitions of sexual assault and other forms of gender-based misconduct, and 93% indicated that they received information on who they can talk to about these issues. Overall, there were not substantial changes from the percentages of the last Climate Survey in 2023 (100% and 88%, respectively).
- 80% of students said that they know where to find help, information, and resources if they or someone they know experiences gender-based misconduct, and 87% said they know where to report it to the Museum if they choose to do so. This reflected a decline for where to find help (93% in 2023), and a slight decline regarding where to report (80% in 2023).
- A strong majority of students (80%) indicated that they are aware of New York’s definition of affirmative consent, which was a decline from the 2023 survey. 79% indicated that they know how to contact the Title IX Coordinator, which was a slight improvement from the percentage in 2023 (73%).
- All students (100%) indicated that they know the Title IX Coordinator can receive and investigate reports of sexual assault and other forms of gender-based misconduct. Similarly, nearly all students (93%) indicated that they are aware that the Title IX Coordinator must provide trainings on these topics. These reflected no noteworthy changes from the percentages in 2023 (100% indicated they knew the Title IX Coordinator could receive and investigate complaints in 2023, and 100% indicated that they knew the Title IX Coordinator had to provide trainings).
- At the time the survey was issued, no student indicated that a member of the Museum community sexually assaulted them or otherwise engaged in gender-based misconduct while a student at AMNH-RGGS, and none of the responding students indicated that they experienced stalking, dating or domestic violence in the form of physical violence or threats. This reflected a marked reduction in the number of reported incidents in 2023 (two reported incidents then).
- Similarly, at the time the 2025 survey was issued, no student indicated that they experienced inappropriate comments, made by a member of the Museum community, regarding their or someone else’s body, appearance, and/or sexual activities. This also was a decrease of reported incidents in 2023 (two reported incidents).
- One student indicated that an intimate partner exhibits controlling behaviors, such as restricting their movements or conversations with others. This was a slight increase from zero such reported matters in 2023.
- Students were asked how likely or unlikely it would be for them to intervene in various cases of bystander misconduct. This year, there were increases across all categories compared to 2023. For example, if someone they knew was sending sexual pictures, web pages, or messages to someone who didn’t ask for them, all said it was “very likely” (92%) or “likely” (8%) that they would say something to try to get their friend(s) to stop (82% and 18% in 2023, respectively). If someone the student didn’t know well made apparently unwanted sexual comments, jokes, or gestures, slightly more than one out of three respondents said it was “very likely” they would say something to try to get them to stop (46% in 2025 compared to 36% in 2023), almost half said it was “likely” (46% in 2025 compared to 27% in 2023), and only 8%

said that it was it was “not likely” that they would say something, a dramatic decrease relative to the 36% who responded that way in 2023. Finally, all responding students said it was either “very likely” (55%) or “likely” (45%) that they would try to intervene if they saw one of their friends leading someone who is obviously drunk or high away to potentially have sex with that individual. Those percentages were the same as 2023.

As always, the Museum strongly encourages individuals to report their experiences to the Title IX Coordinator, a trusted faculty member, or anonymously through the Compliance Hotline. In addition to investigating the matter, the Museum can provide support and resources to students affected by the type of misconduct described in the survey and above.

Conclusion

The Museum is grateful to all the students who participated in this survey, and will use the results to bolster its commitment to create an educational environment free from all forms of harassment and discrimination.

If anyone would like to discuss the results further or has any questions or concerns, please do not hesitate to contact the Museum’s Title IX Coordinator / Equal Opportunity Specialist, Benjamin Marzolf, at (212) 769-5316 or bmarzolf@amnh.org.
